

Quick Facts

- Provides accurate, up-to-date numerical data required in statements, presentations, essays, speeches, research assignments and other projects
- Enables patrons to substantiate theories, justify opinions, prove facts and more
- Supports many curriculums and subject areas and is useful as a general reference tool
- Complements and extends other library resources
- Enables comparative analysis with current and archived data from around the world
- Includes reliable articles from diverse, authoritative sources that have been extensively screened and indexed

Numerical data that supports a wide range of subjects

Students, teachers and researchers require relevant statistics for papers, speeches, research assignments and other projects. However, accurate and up-to-date statistical information often proves difficult and time-consuming to find. Statistics are essential to many subject areas because they substantiate theories, justify opinions and conclusively prove facts. In social studies, science, economics, health, English—indeed, most any subject area—statistics provide the quantitative data required to track trends and monitor change in ways that are impossible through the written word alone. Effective research produces compelling, objective conclusions supported by statistics. Such research and its numerical data are provided in abundance by NewsBank's *StatBank*.

A unique research tool with valuable numerical data

Intuitive and fully searchable, *StatBank* creates an immediate impact in the library by providing support for many patrons' public statements, presentations and positions, as well as for essays, debates, speeches, research projects and much more. Also useful as a general reference tool, this unique database complements and extends the research of other library resources. Beyond, *StatBank* provides multiple perspectives on many current issues and hot topics, challenging patrons to engage in critical thinking. Through comparative analysis, researchers can use both archived and current data in *StatBank* to track trends and compare and contrast numerical data by state, country or year.

A wide range of diverse, authoritative publications with reliable data

The sources of the numerical data in *StatBank* are both diverse and authoritative. They include government, private and non-profit organizations and associations from across the United States and countries around the world. In addition to an extensive screening and indexing process performed by NewsBank, the statistics have been verified and authenticated. Featuring multi-year backfiles for each source, the numerical data in *StatBank* perfectly supports full-text articles and documents on a full spectrum of research topics.
